

## A SELECTION GUIDE FOR THE COVERING OF ROLLS IN FUNCTION OF THEIR ENVIRONMENT

The tables below should serve as an aid in the selection of a covering in function of the conditions to which the application is subject.

Hannecard offers compounds of various elastomers. Your technical contact person will gladly assist you in the determining the suited product for your application.

Or laboratories are equipped with the most modern tools for testing the compatibility of our elastomers with your application.

We do tests on :

- Temperature
- Mechanical load
- Exposure to chemicals
- Dynamic performance

## AN OVERVIEW OF THE VARIOUS ELASTOMERS WHICH HANNECARD IS OFFERING

Symbol	Group name	Max. temp	Hardness Shore A	Important characteristics			
NR	Natural rubber	80°C	25 to 90	<ul> <li>Elasticity</li> <li>Good resistance against abrasion and tear</li> <li>Very good dynamical properties</li> </ul>			
SBR	Styrene Butadiene Rubber	90°C	60 to 95	Excellent abrasion resistance			
CR	Polychloroprene (Neoprene)		15 to 90	<ul> <li>Resistance against abrasion and tear</li> <li>Good dynamical properties</li> <li>Moderate resistance against acids, oils and solvents</li> </ul>			
NBR NIR XNBR	Nitrile Butadiene Rubber		25 to 95	<ul> <li>Excellent resistance against oils, greases and petroleum</li> <li>Good general properties with the exception of heat resistance, which is rather limited</li> </ul>			
EPDM	Ethylene Propylene		30 to 90	<ul> <li>Very good resistance agains acids, bases, oxydants and cetones, lacquers, varnishes and esters</li> <li>UV and ozone resistant</li> </ul>			
CSM	Hypalon (*)		45 to 95	<ul> <li>Excellent resistance against acids, bases and ozone</li> <li>Excellent resistance against abrasion and tear</li> </ul>			
IIR	Butyl		50 to 70	<ul> <li>Very good chemical resistance against acids, bases, oxydants, solvents, cetones, lacquers, varnishes, esters and ozon</li> <li>Gas tight</li> <li>Weak dynamical properties</li> </ul>			
Q	Silicone		20 to 90	<ul> <li>Non-stick properties</li> <li>Resistant against high temperature and ozone</li> <li>Very good electrical insulating properties</li> </ul>			
FKM	Fluoro-elastomer		60 to 90	<ul> <li>Excellent resistance against hydrocarbons, chlorinated solvents, aromatic solvents, acids, bases, oxydants, and vapor</li> <li>Excellent temperature resistance</li> </ul>			
ECO CO	Epichlorydrine		70 to 95	<ul> <li>Electric conductor</li> <li>Moderate resistance against acids, bases, oils and solvents</li> </ul>			
ACM	Polyacrylate	175°C		Good resistance against oils			
HNBR XHNBR	Hydrogenated nitrile		60 to 90	<ul> <li>Very good general physical properties</li> <li>Stability of hardness when used at high temperature</li> </ul>			
PU	Polyurethane	80 -	15 to 98	<ul> <li>Excellent resistance against abrasion, cutting en perforation</li> <li>Good ozone resistance</li> <li>Performances linked to the selected type of PU</li> </ul>			
Composite	Epoxy Polyester	100 -	75 to 85 Shore D	<ul> <li>Very high modulus and good physical properties</li> <li>Good chemical resistance</li> </ul>
