

Hannefilt-XP

Bekledingstype:	Speciale polyurethaan	
Beschikbare hardheden:	70 Shore A	
Beschikbare kleuren:	zwart	
Aanbevolen laagdikte:	min. 4 mm - max. 25 mm	
Temperatuurbestendigheid:	Droog: Nat:	continu 80°C / piek 90°C continu 40°C / piek 50°C
Eigenschappen en voordelen:	<p>Covering quality specially developed and used for the production of cigarette filters. Vs other elastomers it has excellent mechanical properties, upto 3x better. This results in assistance to a longlasting homogenous filling of the cigarette of the cellulose acetate. Resists to the agents used for the processing of the cellulose acetate for processing, flavor, softening, flame retarding, ... The covering quality has antistatic properties and as such its helps to avoid dust attraction during the process.</p>	
Specifieke eigenschappen:	Antistatisch
